Art Unit: 3722

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 1-3 are rejected under 35 U.S.C. 102(b) as being anticipated by Bogner (5174696). Note drill portion 14, blade 15, and the rearward cylindrical mounting portion. Slots 11 having radial projections/locking pieces located circumferentially between them are in locked engagement with entrainment parts of the drilling device/chuck (see column 3, lines 47-52). The diameter of this engaging member formed by the slots/projections is less than the diameter of the flange 2.

3. Claims 1-3 are rejected under 35 U.S.C. 102(b) as being anticipated by Chau-Ngoc et al (6382202). Note drill portion 1, blade 3, and the rearward cylindrical mounting portion. Slots are provided in order to form radial projections 8 in order to transmit torque from the chuck to the tool (see column 3, lines 9-15). The diameter of this engaging member 8 formed by the slots/projections is less than the diameter of the flange 7.

4. Claims 1 and 3 are rejected under 35 U.S.C. 102(b) as being anticipated by Geissler (5253961). Note drill portion 2, blade 6, cylindrical mounting portion 8, engaging members located circumferentially between slots 12 and which project radially, and flange 9 having a larger diameter than the engaging member.
